## Multi-Channel Air Pumps

Aeration is a simple way to increase plant growth and enhance the health of your nutrient solution. Air that is bubbled through a reservoir or tray adds oxygen and creates movement in the liquid, which prevents stagnation. These pumps provide a simple, trouble-free way to intro-

duce air into a hydroponic or aquarium system. They run quietly and efficiently, using only a small amount of electricity. The air outlet(s) take 1/8" ID tubing and can be connected to an air stone or used with tubing alone to bubble air into a reservoir, tank, or tray. All but the smallest model have adjustable outputs, featuring a dial on top to turn bubble production up or down as needed.

|  | Item   | Description    | Output Type | Capacity / Pressure    | Watts | Price          |
|---|--------|----------------|-------------|------------------------|-------|----------------|
|   | 980045 | 1 CH. Air Pump | fixed       | 2.0 L/min<br>0.024 Mpa | 2.5W  | See Price List |
