

Welcome to the Pure Power of **SUNMASTER®**

GROW LAMPS AND BALLASTS

Congratulations

on purchasing the highest output 1000W HPS system available – we are confident that you will reap the results.

Most plants have very high absorption potentials with artificial lighting unable to match the more intense power of natural sunlight. Increased light level (flux) gives many plants more key energy for photosynthesis and promotes healthy, accelerated growth. With 358 PAR watts and the ability to provide optimal spectral outputs for plant growth phases, SUNMASTER® really delivers.

OPTIONAL 1000 Watt Cool Deluxe

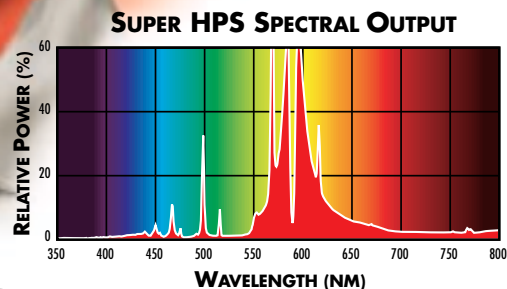

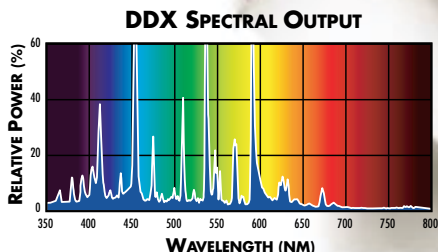

- Chemically engineered to deliver a proportionally large peak of energy centered on 450nm (blue) to promote vegetative growth
- Delivers an unequalled 350 PAR watts of blue-weighted output at 100,000 lumens
- Provides key vegetative light energy for larger leaf mass and thicker primary stems
- Offsets the blue deficiencies of high pressure sodium
- Order Part #
LM.1000W.U37.DDX

1000 Watt Super HPS Deluxe PURE POWER

- Proven system performance – more PAR Watts than any other horticultural source
- Increases photosynthetic flux for greater yield and robust flowering
- Compare – SUNMASTER promotes side-by-side comparisons with competitive sources

QUALITY

- Lamp and ballast are designed for compatibility and provide full system warranty
- Special ballast design criteria assure cool, quiet operation with long-life (over 25 years under normal operating conditions)

**Partner your SUNMASTER
1000W Super HPS with the new
SUNMASTER 1000W Cool Deluxe conversion lamp for
the most powerful start-to-finish lighting system available!**
